

Case 4 · Conditional landmark update

Single DEVELOPMENT patient · observed paired-ultrasound correspondences

6 fitting observations | 13 held-out landmarks | all points retained

Frozen-report summaries (mm)

	Held-out RMS	Held-out median	Held-out maximum	Fit RMS (6 only)
No shift	4.045	3.697	5.222	4.083
Proper rigid	1.020	0.819	1.663	1.063
Fixed IDW ($1 / \text{distance}^2$)	1.104	1.002	1.832	< 1e–15

Fit residuals describe the conditioning observations, not validation. No confidence interval is reported.

Scope: conditional update using observed correspondences. This is not a preoperative-only prediction, RL result, dense-mechanics validation or clinical-safety claim. Global mathematical support does not verify retained tissue.
