

Numerical model study · N32 spatial diagnostic

61 saved load states · no measured-force validation or calibration

ENDPOINT · STATE 60

0.98519 mN

Retained two-latest-limit envelope

0.72417 mN

Original fixed allowance

0.69170 mN

Latest single-model estimate

Spatial criterion remains unmet

12 / 60 nonrest states exceed the retained-envelope allowance.

Eligible nonrest states

N8 / 12 / 16 25 / 60

N12 / 16 / 24 60 / 60

N16 / 24 / 32 60 / 60

State 0 is retained as not estimated.

Conditional power-law model sensitivity; neither curve is a rigorous continuum error bound. No finest-level temporal-convergence claim.

Saved numerical mechanics comparison only. No primitive logs, biological force curves, patient data, fitting or solver execution used for this figure.

Comparison SHA256: 0c989b6de65b14df... · Independent saved-result review: 10a9c97d61f95440... · Null estimates are not plotted as zero.
