

Preoperative volume did not improve the primary Brier score

RHUH-GBM · fixed leave-one-out analysis · 40 patients (14 recorded deficits, 26 “No”)

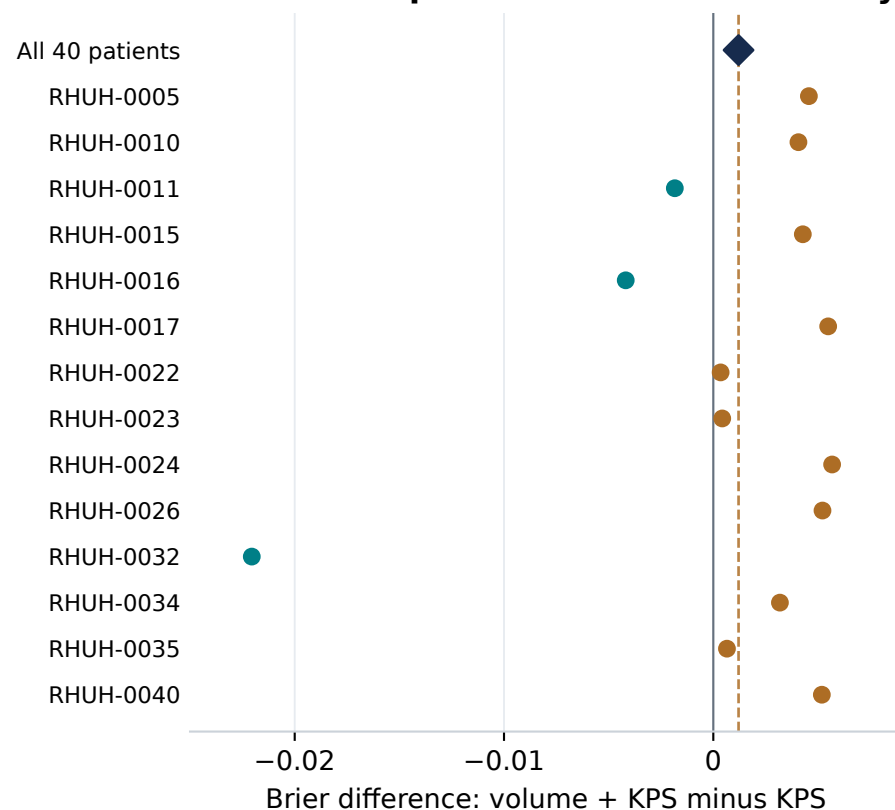

A Primary metric · all 40 patients

Volume – KPS: +0.00120647

Positive difference means worse with volume.

B Positive-patient deletion sensitivity

Each deletion: 39-patient leave-one-out analysis.
3 negative / 11 positive differences; no intervals.

Exploratory internal association with a recorded postoperative category; new/worsened status and assessment timing are unverified.

No external validation, clinical calibration, causal effect, or route-specific harm estimate.
